Understand

4. Parse Data: List each field and its data type. Refer to Fry (page 8-9, 2007) for examples of description of different data types (string, float, character, integer), you can also create user defined types (some combination that uniquely identifies data like the Index type in the Fry 2007 page 9 example) *

The Phil column and cities are string data. The years are integers, but the temperatures are float points.

5. Assumptions: List any assumptions you are making about the data and/or the visualization challenge (aka the project) *

I assume that the data is correct and that there are conclusions to be drawn.
